

# CATiLINK

Sharing Your Portable Media Just Got Easier

PATENT APPLIED FOR

Sharing music and video from portable players and computer based media centers has always been difficult. Attaching multiple headphones or gathering around a tiny screen can be trying at best. Now the media you treasure on your portable player can be accessed throughout the house with CATiLINK. Consisting of two wall plates that are connected with inexpensive CAT-5 wire, the CATiLINK system provides an easy to install, remote controllable solution.

Installation is simple. Locate the transmitter plate in an area where the portable media system is normally located and the receiver plate by the whole house A/V system. Determine the best routing of CAT-5 wire from your source equipment and the receiving A/V system and make the connections (typical network practices apply).

- Easy installation
- Audio connection - 1/8" jack or RCA jacks
- Video connection - S video (AV model)
- AV model remote controllable
- Available in a variety of colors

CATiLINK	Audio only
CATiLINK AV	Audio and Video / remote controllable

## MULTI-MEDIA

Turn Your Multi-Media Computer into a Whole House System

Now your multi-media computer can provide entertainment for the whole house! Similar to the CATiLINK AV but without infrared control, these units utilize CAT-5 wire to send your media from a computer to the main house A/V system. Installation is simple and the performance will amaze you. Runs of over 500 feet are possible with virtually no signal loss! Get the most out of your computer - turn it into a multi-media server.

- Easy installation
- Audio connection - 1/8" jack or RCA jacks
- S video and Composite versions
- Available in a variety of colors
