▶ START: 6/1/09

▶ END: 8/1/09

The new 702L 70-volt to line level converter will be available at a special price for its first 2 months in the audio video market. Available only to Audioplex customers.

## NEW PRODUCT SPLASH!

*Expect Innovation!*

The 702L converts a 70 volt constant voltage signal to line level. It is used to allow an amplifier with a 70 volt output to drive a second amplifier with a line level input. The output is transformer isolated from the 70 volt system and this device only uses 1 watt of power from the 70 volt line. You will need 2 units for stereo.

### INPUT CONNECTIONS:

Connect your 70 volt system output to the binding post terminals on the 702L. It can be connected in parallel with other 70 volt devices and provides a 1 watt load to the 70 volt system.

### OUTPUT CONNECTIONS:

Connect the input of the driven amplifier or other device to the RCA jack output of the 702L. If the amplifier has stereo inputs, a Y-connector cable such as the Audioplex Y-2M may be used.
