

Flexibility...outside the box

New CAT-5 DRIVER kits offer increased versatility!

Based on our innovative CAT-5 Driver kits these new models have installation flexibility built-in. By adding a second set of outputs, installers can drive two televisions with one kit. Two versions are available; the C5CVK-Loop, which locates the additional output on the transmit plate and the C5CVK-DR which has two outputs on the receiver plate. The C5CVK-loop is perfect for sharing a video source between a local and a remote television. The C5CVK-DR works well for commercial applications with multiple televisions or for a home owner who desires a separate signal for the television and a digital recording device.

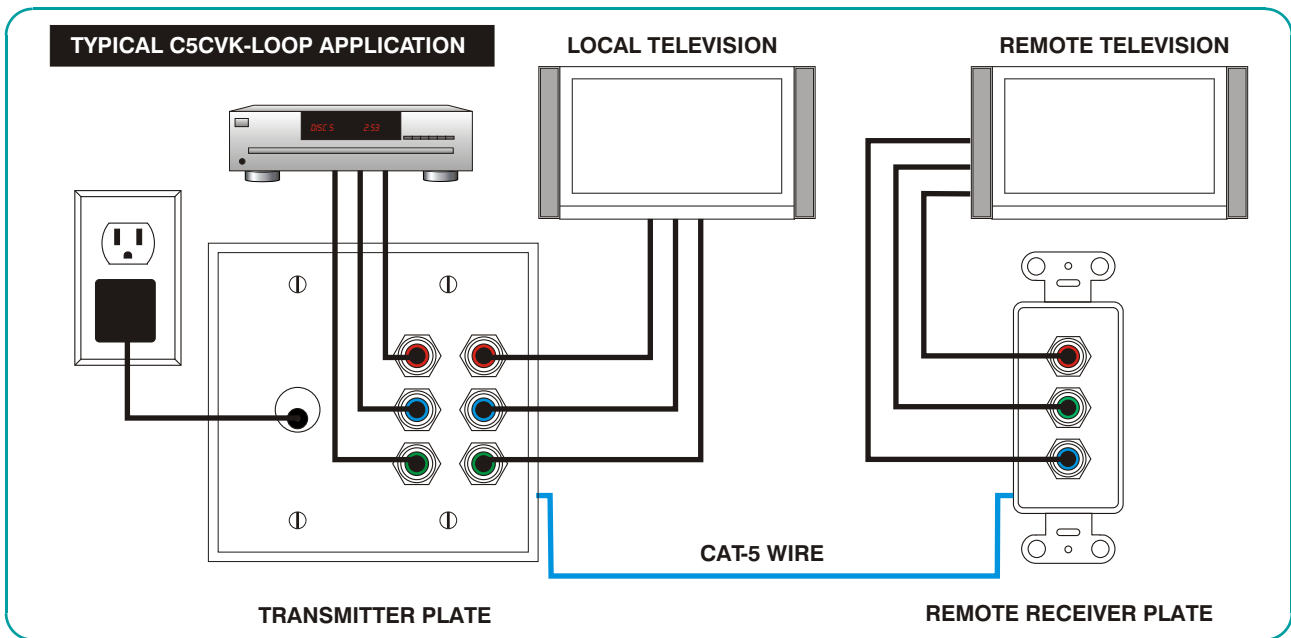

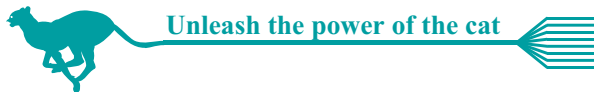

For installations that call for some flexibility, think outside the box and try the latest from Audioplex Technology!
