**AUDIOPLEX TECHNOLOGY® INTRODUCES
LOW EMISSION IRBUG**

MELVIN VILLAGE, NEW HAMPSHIRE - Audioplex Technology introduces the latest in it's innovative line of infrared products, the Low Emmision IRBug.

Most emitters have the tendency to spread IR signals beyond the intended target into the surrounding room, which in many cases is acceptable and in some cases desirable. Unfortunately when the installation requires precise localization of the IR signal a traditional emitter just won't do. Audioplex now has the answer with our new Low Emission IRBug. By implementing a unique process during molding, we are able to focus the IR signal and eliminate unwanted IR splash into the room.

Audioplex Technology's main office and factory is located in Melvin Village, NH. Audioplex manufactures a full line of Infrared Repeating systems, as well as volume controls, swtichers, amplifiers and impedance matching products. All products come with a lifetime warranty against defects in workmanship and materials. Custom component design is also available. For more information or to receive a complete product catalog, please call 1-800-257-2077. Information is also available on the World Wide Web at www.audioplex.com.
