

LG/Zenith Owners... Take Control!

Introducing the RC-LGI Infrared Interface

The RC-LGI Interface allows easy integration of conventional infrared repeating systems with LG/Zenith flat panel televisions. Utilizing the IR jack on the rear of the television, the RC-LGI allows complete control of your system and the television with no visible emitters that can take away from the clean flat panel look.

Installation is as simple as plugging the included 6 foot jumper cables from the television to the RC-LGI and from the RC-LGI to an Infrared connector block. Connect the included power supply and you're ready to take control! Sensitivity can be adjusted via the trim pot located on the side of the RC-LGI.
